SCRUB OUT MOULD GROWTH

A ready to use fungicidal cleaner and surface biocide in a novel bottle brush. For use against condensation mould, mildew and algae on internal surfaces such as masonry, tiles, wood and plaster.

Provides an exceptional combination of biocidal and mechanical cleaning. Ideal for preparing and treating difficult surfaces such as window frames prior to painting as well as the general cleaning of tiled and associated areas.

Preparation

1. Prepare surfaces by removing non-washable and loose material, e.g. flaking paint, grease or dirt.
2. Make good any surface defects and rub down to a smooth finish.

Use and Application

1. Wearing gloves hold the bottle upright, unscrew the brush head and remove the plastic insert.
2. Screw back the brush head and turn the bottle upside down to scrub the surface.
3. Squeeze the bottle occasionally to apply extra solution as required.
4. Wipe off any excess solution from the surface with a clean cloth and allow to dry thoroughly.
5. A second application allowed to dry on the surface delays the return of mould subject to conditions such as condensation.
6. When finished replace the plastic insert and rinse the brush head under running water.

Product Information

Packaging: 250ml bottle with brush head.

Drying Time: 1 - 4 hours normally.

Practical Coverage: 10 - 12m²/litre when diluted depending on the porosity and roughness of the surface.

General

Technical Leaflet

There are basic measures to assist in the control of condensation and the black mould. Heyen Anti mould and Condensation Control products complement these basic controls and will prevent these problems occurring for many years.

These methods are particularly helpful in the domestic environment but can be applied equally to most commercial premises.

It is always important to reduce the risk of condensation by observing the following simple recommendations:-

- Ensure rooms are always warm and properly ventilated, maintaining some low heating throughout the day if possible.
- When cooking, washing, bathing or drying clothes, keep the door closed and the window open - this prevents warm moist air moving to colder areas of the building.
- In cold weather keep some heating on all the time.
- If a paraffin or flue less gas heater is used ensure a window is open a little (every litre of paraffin produces about 1 litre of water).
- Improve internal/external wall insulation.
- Use ventilation systems where appropriate.

Health and Safety

This product is approved for amateur use as directed under the Control of Pesticides Regulations 1986. HSE No. 7550.

Please read all the directions for use and safety instructions on the container label before using the product.

We can't control the appliance of our products, and the different working conditions can lead to different results. That is why it is necessary to make some tests, before an application / working / installation. That is the reason why we can only take on responsibility for the quality of our products within the scope of our general sales- and supply conditions, not for improper use. Consultation or the giving of information do not justify any rights or an extra-obligation from the contract of sale. All statements, concerning the consumption, is average data. In isolated cases a difference is possible. Technical changes the products, as well as changes in the size or kind of packing is within our rights.
